

# the Diana app tests

James Cockroft

25 January, 2014

I've had this app for several months, and from the moment I started playing with it, I've wanted to do a review. This pdf is a supplement to that review.

I hope this document shows some of the ways in which this app works, some of the filters it applies and how those filters interact with original pictures, and some hints to how the algorithms work to combine the images.

The pictures themselves, aren't great, so I hope you're not looking for masterpieces. But these are not intended to be masterpieces: they're simply my own tests to see how this app works. I hope you find this useful.

Pictures used for test 1. Both shot with the built-in camera app, and processed in Filterstorm.  
The white picture has had a vignette applied to make it visible here.

your wish

Original photos for the tests 2 and 3. For test 2, these were converted to black and white, and had brightness and contrast adjustments applied in Filterstorm to make them close to pure black & white. In test 3, I used the original images. This test shows that some of the filters (particularly Glitter Mama and Unicorn's choice) depend on characteristics of the underlying pictures to create effects.

Nice one!

Try me again!

layout for tests 2 (top) and 3 (bottom)

Have you seen all the filters?

Nice one!
